**Correct:B**

**18.A DBA was examining the Log Statistics, Log Activity section in the OMEGAMON Performance Expert Tool and noticed a large value in the field UNAVAILABLE OUTPUT LOG BUFF. This is an important and critical performance metric. What does this performance metric mean?**

- B.The active logs were not stripped by DFSMS and the active log data sets have to be processed sequentially so many times.
- C.The active log data sets were not placed on different volumes to reduce contention so a large amount of I/O activity showed up in the OUTPUT BUFFER field.

**Correct:D**

**19.An end-user indicates that the DRDA client application accessing DB2 for z/OS is very slow. However, other local applications accessing the same tables are running fine. What would indicate that this could be a DB2 problem?**

- A.Calculate the non-nested CLASS 1 CPU time minus non-nested CLASS 2 CPU time. If the value is high, it suggests a problem in the DDF address space.
- B.Investigate the CLASS 3 suspension time. As class 3 time includes the time that DB2 spends sending/receiving network messages, a high value is a possible indication that the network is experiencing a slow-down.
- C.Calculate the non-nested CLASS 1 Elapsed time (ET) minus non-nested CLASS 2 ET. If the value is high, this can only be caused by spending most time in the application, and therefore the application should be investigated.
- D.Check to see if the DB2 remote connection can become inactive at commit (Type 2 inactive). If not, this leads to a high non-nested CLASS 1 ET and is likely the cause of the performance problem. Inactive connections will use less CPU than threads that stay active all the time.

**Correct:A**

**20.An application has been running in production for a long time. The size of the objects involved has not changed, but the application is running much slower than in the beginning. When should the DBA consider manually REBINDing the application?**

- A.After REORGing the objects with inline statistics.
- B.When dynamic SQL is used, but only after REORG and RUNSTATS has been performed.
- C.Actually it is NOT recommended to perform manual rebinds but rather have DB2 perform automatic rebinds.
- D.If the size of the objects has not changed after gathering RUNSTATS data, the access path is very

unlikely to change, and therefore no REBIND is needed.

**Correct:A**
