2.Which of the following best describes a cloud-native app?

A. An application where all logic is coded into a single large binary.

B. An application that publishes an HTTPS web front-end.

C. An application that takes advantages of cloud computing fromworks and their loosely coupled cloud services.

D. An application that leverages services that are native to public cloud platforms such as Azure, GCP, and/or AWS.

Answer: C

Explanation:

Cloud-native apps leverage cloud computing frameworks and tend to be microservices based, where individual components of the app are coded as individual.

3.Which project in this list is a leading project in the observability space?

A. Jaeger

B. Vitess

C. Argo

D. Kubernetes

Answer: A

Explanation:

https://github.com/cncf/landscape#trail-map

4.To specify a Kubernetes object which language is used?

A. JSON

B. Go

C. YAML

D. Node

E. Python

Answer: C

Explanation:

https://kubernetes.io/docs/concepts/overview/working-with-objects/kubernetes-objects/

Understanding Kubernetes Objects

This page explains how Kubernetes objects are represented in the Kubernetes API, and how you can express them in `.yaml` format.
